

STRIPS

“type 0-150/0-200/0-300”

CLOSE JOINT CEILINGS

- Full closing of cavity
- Fast disassembly
- Full range of colours
- Customer choice

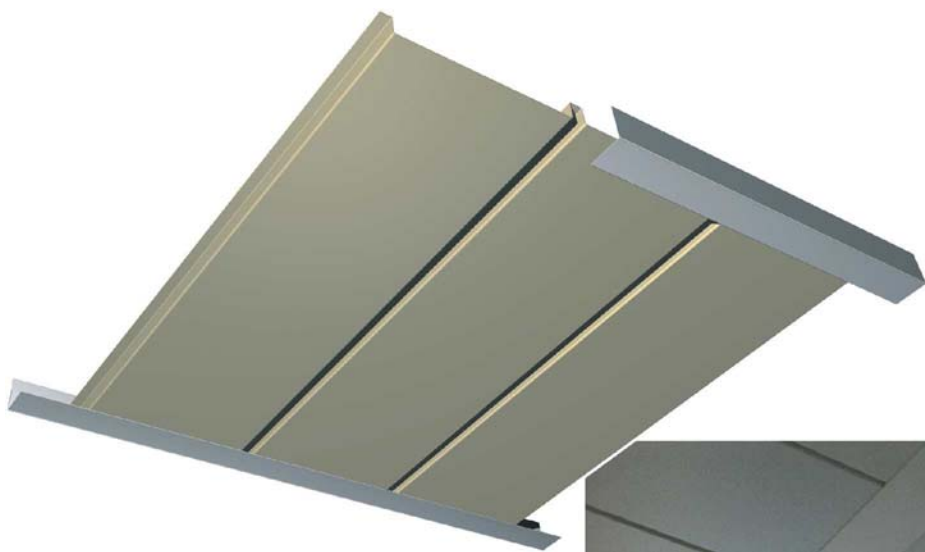

A complete closing of the cavity can be obtained with strips “SERIE 0”; this is the ideal solution for suspended ceiling that require high compactness and, in the meantime, easiness of disassembly for inspection.

Strips “SERIE 0” are made of prepainted aluminium and do not require carriers, therefore they are also called self bearing. Each modular element can be easily disassembled and allows full accessibility for upper service maintenance.

STRIPS

“type 0-150/0-200/0-300”

CLOSE JOINT CEILINGS

Strips “SERIE 0” are an ideal solution in all designs that require a small cavity and then a short suspension.

In wide rooms it is needed to use special profiles or FLATLINE to lay in the strips.
